

Final simplified views: Y layer, X layer, and opaque assembled view

**Y LAYER: front/back axis
EXPANDED / OFF**

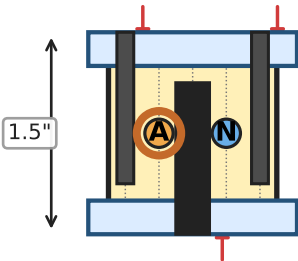

lane order: fork | A | center tongue | N | fork

full-colored layer = physical magnetic gap
(no slots/gaps are cut into the pole plates)

**Y LAYER: front/back axis
CONTRACTED / ON**

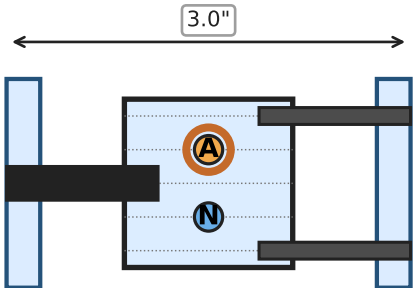

lane order: fork | A | center tongue | N | fork

full-colored layer = physical magnetic gap
(no slots/gaps are cut into the pole plates)

**X LAYER: left/right axis
EXPANDED / OFF**

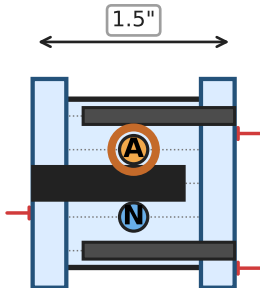

same size as Y layer, rotated 90°

full blue layer = physical magnetic gap
(no white lanes shown)

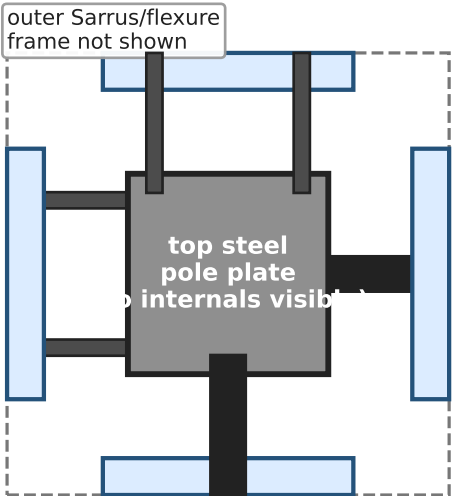

**X LAYER: left/right axis
CONTRACTED / ON**

same size as Y layer, rotated 90°

full blue layer = physical magnetic gap
(no white lanes shown)

OPAQUE ASSEMBLED VIEW — what it would look like externally

Opaque view hides A/N rods and internal gaps.
You only see the top plate, carriers, and protruding steel keepers.

The layer color is the whole magnetic gap region. The dark steel keepers move over it; no white lanes/slots are implied. X layer is the same geometry as Y, rotated 90°.
